

02 July 2020

The CIFFC National Preparedness Level remains at **Level 2**

Most Agencies have Low to Moderate wildland fire hazard status and national resource levels remain adequate to meet occurring and anticipated wildland fire activity.

Reported active fire locations are updated daily as provided by fire management agencies (provinces, territories and Parks Canada). The fires data is managed through a national Data Integration Project (DIP) coordinated by the Canadian Interagency Forest Fire Centre (CIFFC) and Natural Resources Canada with participation from all partner agencies.
