

GOC Geomatics Products during COVID-19

The GOC Geomatics section serves a unique function in the Government of Canada, providing emergency management-related geomatics support to the Government Operations Centre, and other departments. Many departments do not have dedicated geomatics staff, and while events are occurring, their resources are drawn to other activities. Since the full-scale response effort began for COVID-19, GOC Geomatics has been assisting others with their work, in addition to the regular GOC-related taskings and responsibilities. The numbers shown here represent the activities since March 20, 2020.

Previous Week - May 31 to June 06
